## III．Information Technology（IT）Department

## a．About the IT Department

Information Technology Department was established concurrently with the establishing of the College of Computer at Qassim University in the academic year 1427／1428，to cover the needs of the different sectors in the kingdom from this specialty and to prepare the needed qualifications and experiences．The department is looking to prepare the student to be specialized in the Information Technology field after his graduation．The curriculum was prepared to outfit the student with the necessary knowledge＇s and experiences required for professionalism in this field．Graduator is prepared to be able to work in the governmental and private sectors as an Information Technologist，and to work in Universities and Educational Institutions，Communications and Internet Companies， and various Companies and Organizations related with this field．
The graduates of Information technology program will be able to work effectively at planning，analysis，design，implementation，and maintenance of the information systems and computing infrastructure．The shaded portion in the Figure 1 represents the information technology discipline．The IT students have a special focus on satisfying human needs that arise from computing technology．

Saudi Arabia

Figure 1. Scope of Information Technology program

## b. IT Department Vision Statement

The department is looking to become distinguished in higher education and scientific research in the Information Technology field, contributing to sustainable development.

## c. IT Department Mission Statement

To provide qualified and trained graduates in the field of Information Technology in order to meet the market needs and produce an excellent scientific research, to contribute the technical infrastructure by adapting novel technologies to reinforce a knowledgebased economy and to improve the performance of the local community institutions, through the use of state-of-the-art techniques, resources development, and national and international collaboration.

## d. IT Department Program Educational Objectives (PEOs)

1. Knowledge:

Graduate will be able to solve the problems with knowledge, skills and high quality education acquired during program with basic concepts, principles and theories in different fields of Information Technology, and scientific researches.
2. Professional Achievement:

Enable students to apply their knowledge, develop solutions for the problems and implement these solutions efficiently and effectively for different applications and systems in the fields of Information Technology that contributes nationally.
3. Lifelong Learning:

Enables the graduates to complete the graduate studies in the Information Technology and other related fields.
4. Communal Responsibility:

Prepare students with the knowledge, and to provide assistance and guidance for them to acquire required skills in the field of specialization as active members of a teamwork, and understanding of importance of the team and bearing personal and social responsibility.
5. Ethical Standards:

Enable students to consider the ethical, legal, security and social issues of the technology, learn them then take responsible actions.

## e. IT Department Program Student Outcomes

The student outcomes for the IT program are:
a) An ability to apply knowledge of computing and mathematics appropriate to the discipline.
b) An ability to analyze a problem, and identify and define the computing requirements appropriate to its solution.
c) An ability to design, implement, and evaluate a computer-based system, processes, components, or programs to meet desired needs.
d) An ability to work effectively in teams to accomplish a common goal.
e) An understanding of professional, ethical, legal, security and social issues and responsibilities.
f) An ability to communicate effectively with a range of audiences for the purpose of supporting and serving the community and the surrounding environment.
g) An ability to analyze the local and global impact of computing on individuals, organizations, and society
h) Recognition of the need for and an ability to engage in continuing professional development
i) An ability to use current techniques, skills, and tools necessary for computing practice.
j) An ability to use and apply current technical concepts and practices in the core information technologies of human computer interaction, information management, programming, networking, and web systems and technologies.
k) An ability to identify and analyze user needs and take them into account in the selection, creation, evaluation and administration of computer-based systems.
I) An ability to effectively integrate IT-based solutions into the user environment.
m) An understanding of best practices and standards and their application.
n) An ability to assist in the creation of an effective project plan.

## f. Degree Obtained by the Student

Information Technology graduates are awarded a Bachelor of Science Degree in Information Technology.

## g. IT Specialization Requirement

All CoC students are required to undergo and pass four common semesters in the college to prepare them for their department specialization, such as Programming, Logic Design, Database, and Advanced Math. After finishing and passing these courses, CoC students can apply for specialization in the IT department.

## h. IT Program Options

The graduates from the program obtain a degree of Bachelor of Science in Information Technology. There is only one Information Technology Bachelor program, and all students are full-time day and on-campus program students. The program provides the student two opportunities for industrial training; either through a two-month summer training program or through a 7-month COOP training program. The summer training program is equivalent to 1 credit while the COOP program is equivalent to 12 credits.

## i. Graduation Requirements

To become eligible for a Bachelor of Science degree in an Information Technology program, a student must complete of the number of semester-credit-hours required by the IT program (162 credit hours), cumulative and major GPAs of 2.00 or higher on a 5.00 point scale.

## j. Career opportunities for graduates

A graduate program of Information Technology can filled one of the jobs listed below:

- Database administrator.
- Analyst and designer of information systems.
- Developer of information systems (software engineer).
- Specialized in the development and data processing.
- Specialized in e-commerce.
- Specialized in information security.
- Designer and developer of web pages.
- Technical and systems support and end users services.
- Technician in information systems.
- Technician of computer lab.
- Technician specialist in personal computers.
- Applications Programmer.
- Developer of systems security.

Saudi Arabia

- Specialized in educational jobs

## Course Numbers Convention

The course coding consists of two main parts (Alphabetic and number of three digits):
First part "IT" (Alphabetic part) is an abbreviation refers to the Department specialization "Information Technology".

Second Part "number of three digits":

- The first digit (from left) refers to the year in which the course is taught in the Department plan.
- The second digit (from left) refers to a sub-specialty (track) of the Department plan.
- The third digit (from left) refers to sequence of courses in a track.

## As in an example
